Lock C for USM Haller

Ultra-compact design,
dual technology, easy to use.

When Hanna's on holiday, Alex still has access.

Give others access to your private locker via the app.

Max and Melanie are dressed too warmly for the museum.

Choose a coat locker and use it temporarily at any time with the key card.

Pete and Sylvia are working on a project together.

Store shared tools for teamwork safely – each team member has individual access to them.

Dorian doesn't like sharing with his little sister Suzie.

Individual lockers have their advantages at home too.

After desk sharing, Steve stores his belongings in a different locker each day.

Flexible use lockers are available to all employees.

Simon safeguards his sensitive documents and tasty treats.

What's private remains private – kept securely in place.

Lock securely,
share easily –
with the new lock C
for USM Haller

The USM Haller modular furniture system is an expert when it comes to organising space – classically attractive and infinitely versatile. With the new electromechanical lock C and the specially developed USM app, storage space and lock management take on a whole new dimension. Thanks to its dual technology (RFID & Bluetooth), the lock can be operated easily using a key card or a smartphone, via the intuitive, user-friendly app.

The lock C can be seamlessly integrated into all USM worlds.

Whether in a café or an entrance area – lockable storage space for employees is a sign of appreciation.

Clever use of storage space

Making efficient use of existing spaces is USM's core competence. The USM Haller lock C takes storage space to a whole new level. Temporary, personal or with shared access. Existing storage space becomes even more valuable the more versatile it is to use.

USM has always offered products with added value that make efficient use of space, boast a contemporary design and can be constantly adapted to changing requirements.

Connectivity – up to three user modes offer a variety of new applications

Thanks to its three user modes, the lock C is ideal for meeting different and changing requirements. For example, free lockers can be used for temporarily storing personal belongings, whereas other lockers can be permanently customised for long-term use. For customised lockers, users have the option of sharing access to the lock and the locker contents with other people or groups of people via the USM app.

Public Locker mode

A row of lockers is available to several users – they simply choose a free locker and lock it using the card or the app. Ideal for temporary usage in open spaces, for desk sharing or as a cloakroom in reception areas.

Personal Locker mode

The same locker is assigned to a certain person for a long time. As such, the locker owner can safely store their personal and confidential documents there.

Shared Locker mode

If one person is absent, access to the locker can be shared with selected individuals. For teams or project groups, one locker can be used as a shared storage location.

Thanks to its dual technology (RFID & Bluetooth), the new lock C can be operated using a key card or a smartphone.

An attractive cloakroom

Receive guests in your company or visitors in your museum? Offer them a safe place to temporarily store all of the things they don't want to carry around with them the whole time. And in a classic, modern look, because first impressions count after all. USM Haller is equally attractive and accessible from all angles and comes in a wide range of colours and shapes so that you can express your individuality from the first encounter – for a lasting effect!

Central storage area, used by everyone, specifically designed

There is less need for permanent storage areas in the workplace, especially in co-working spaces where workstations are no longer permanently assigned to one person but are occupied temporarily according to needs. However – or rather because of this – employees need some storage space where they can keep their personal belongings for the day or even longer. With the lock C, employees can choose any free locker each day.

What's private should remain private

Whether confidential documents or personal belongings – with the lock C you can keep your important things safe. The different applications range from executive offices or private staff lockers to childproofing at home.

Share contents with others

It sometimes comes in handy when safely stored items can be made immediately available to others. If one team member is on holiday or remote working, for example, they can give a colleague access to a specific locker in the office conveniently and remotely via the app.

Shared lockers in collaborative offices

When teams work on an interdisciplinary level, they also need shared tools. Thanks to the new lock C, an entire user group can be given access to a locker. That way, the tools that are worked on jointly can be stored safely and accessed flexibly by all.

Childproofing – a particular advantage at home

Our kids are clever, and they always seem to manage to find the key to those places where treasures such as sweets or games consoles are safely stowed away. But they can't outsmart the new lock C: with the app you determine when and how often you grant access to each specific locker.

Clear and simple management

With keys it's always the same – you wonder where you last put them ... or which key goes with which locker ... and how to organise the management of lockers and their keys among employees...

But these questions are a thing of the past with the USM Haller lock C. In basic operation (public locker mode) you don't have to go through the hassle of assigning one key card or one smartphone to a specific lock. Therefore, you don't even need a conventional locking plan to organise the lockers, which makes managing the locks much easier. If a key card gets lost, the Power User can simply carry out an emergency opening and issue a new key card.

The USM app gives users a clear overview and is easy to use. For the administrator, it serves as an intuitive tool not only for organising the locks, but also for keeping an eye on the battery level, updates and log files.

Straightforward battery replacements

The batteries can easily be replaced from the outside in just a few steps. At the same time, the lock remains locked and the contents securely stored.

User-friendly and playfully intuitive – manage lockers with the smart USM app.

Ready to retrofit

The new lock C blends seamlessly into the classic product design.

Easy retrofitting

As with all USM system parts, the new lock C can be retrofitted into your existing USM furniture in keeping with the backward compatibility principle. The existing handle or lock handle can simply be replaced with the new lock C without having to replace the whole door.

Cleverness – high-tech in a simple design

The lock C combines electronics and mechanics, both produced to the usual highest quality. Compact and in line with the timeless aesthetics of the design classic.

The new lock C is compatible with all available metal doors in the 14 USM colours:

Enjoy the benefits of using
the new lock C:

Keep your secrets
safe or share
your treasures!
